

Exercise # 2

- If a Byte is assumed to represent a number, as described earlier, then what is the range (minimum and maximum values) of numbers that can be stored in a 8-bit Byte?

Exercise

- Represent each of the following quantity in 2-bytes using sign-magnitude method.

65536

196

-65535

-32

100015

Exercise # 5

- Represent the following integer quantities as sequence of bytes encoded using ASCII characters.

20456

196

1024

32

100015
