Month Year

Abstract

An Abstract is a short summary of the work being reported. Three to five sentences describing the essence of the work. An abstract is a short, 50-125 words summary of a work. An Abstract should state: the purpose, findings, and conclusion of your work without commenting on or evaluating the work itself. **It should be only one paragraph.** Put the abstract on a separate page that follows the title page.

Chapter 1: Introduction

This chapter is mandatory. The introduction should contain a brief overview of the problem being addressed and the background information needed for the reader to understand the work being done and the reasoning behind it.

The last paragraph of introduction chapter should contain an outline of the entire report. Summarize each chapter in one line to make the last paragraph.

1.1 Purpose of this Document

Specify the purpose of this Project.

1.2 Intended Audience

1.3 Definitions, Acronyms, and Abbreviations

List all important definitions, the acronyms and abbreviations used in this document.

SDG:	Sustainable	Development	Goal
-------------	-------------	-------------	------

Chapter 2: Project Vision

For each related work provide a paragraph of introduction and in the end a paragraph of conclusions. Give a page break after the chapter ends. **This chapter is mandatory.**

Clearly specify the goals and objectives of the project along with the scope of the project. (You can make sub-heading of goals and objectives and scope of project).

2.1 Problem Domain Overview

Describe in full detail what your system does. This section can be further divided into sub-sections, but basically a paragraph description of the system is required.

2.2 Problem Statement

2.3 Problem Elaboration

Describe the problem in detail and the various sub-problems you would work on.

2.4 Goals and Objectives

Write goals and objectives here.

2.5 Project Scope

Specify scope of your project here

Chapter 3: Literature Review / Related Work

For each related work provide a paragraph of introduction and in the end a paragraph of conclusions. Give a page break after the chapter ends. This chapter is mandatory.

Chapter 4: Software Requirement Specifications

Describe all modules of requirements and design in clear English text along with the necessary diagram and figures. Anyone reading your report should be able to reproduce your system/results after reading it. It describes functional requirements, design constraints, and other factors necessary to provide a complete and comprehensive description of the requirements for the software.

risks

etc.

Chapter 5: Proposed Approach and Methodology

The proposed approach could be a Framework, Heuristic, Algorithm, Protocol, or a Mathematical-model.

For each chapter provide a paragraph of introduction and in the end a paragraph of conclusions. Not the programming code but the algorithmic and procedural details especially related to the hidden/ backend algorithms that are not covered in the design.

NOTE: This chapter is optional for **Development** projects but compulsory for **Research** projects.

Chapter 6: High-Level and Low-Level Design

Provide the high- and low-level design of your system in this chapter. Select the design that is appropriate for your project.

Chapter 7: Implementation and Test Cases

For each chapter provide a paragraph of introduction and in the end a paragraph of conclusions. (Not the programming code but the algorithmic and procedural details especially related to the hidden/ backend algorithms that are not covered in the design)

Chapter 8: User Manual

Design a complete user manual of your application and add that in this chapter.

NOTE: This Chapter is optional for **Research** projects but compulsory for **Development** projects.

Chapter 9: Conclusion and Future Work

This chapter is mandatory. Give conclusions and summary of the work done.

References

This chapter is mandatory. List all important sources of information which have been consulted for this project.

Appendix

Appendix A: Guidelines

This section should include all supporting information from the project that was not included in the body of the report. You should include surveys, complex statistical calculations, certain detailed tables and other such information in an appendix. The information presented in this section is important to support the work presented in the body of the report but would make it more difficult to read and understand if presented within the body of the report.

Cite the appendix items in the report narrative (write "see Appendix A") and organize appendices (e.g., Appendix A, Appendix B,

Any tables, figures, forms, or other materials that are not totally central to the analysis but that need to be included are placed in the Appendix.

Appendix B: Heading of Sample Appendix B

Following is a sample code with “code” style format.

```
Void SampleFunction(){  
    Print "Hello World.";  
}
```

Formatting Guidelines

This document also serves as style guide for final year project reports. In order to give a similar high-quality appearance to all final year software project reports this template uses a collection of predefined Microsoft Word formatting styles. **These styles should be used without modification or replacement.** Font in the document is *“Time New Roman”*. This template provides following styles:

- **Title** – the main title style
- **Title2** – the subtitle style
- **Body Text** – style for paragraphs
- **Caption** – the style for a figure or table caption
- **Table Description** – the style for description of table, it must be added after caption.
- **Figure Description** - the style for description of figure, it must be added after caption.
- **Code** – the style for program source code
- `int x = 10; // Writing important code`
- **Table Header Row** – Style for the header row of table
- **Table Grid** – the style for the data rows in the tables
- **Reference** – The style for references
- **Bullets** – The style for the bullet lists
- **Numbered List**– Style for numbered lists

All Heading styles with different level numbers are listed below.

Chapter 1: Heading 1

1.1 Heading 2

1.1.1 Heading 3

1.1.1.1 Heading 4

1.1.1.1.1 Heading 5

1.1.1.1.1 Heading 6

1.1.1.1.1.1 Heading 7

1.1.1.1.1.1 Heading 8

1.1.1.1.1.1.1 Heading 9

Tables and Figures

Tables and figures should be centered horizontally. The caption button should be used to insert caption for both the figures and tables. All figures and tables must be numbered properly. Always refer to tables and figures according to their numbers. A table or figure can be cited as follows: ‘see Table1’ or ‘as shown in Table1’. The caption of table should be centered above the table and figure caption should be centered below the figure. Place the tables/figures close to their reference. Use “Table Header Row” and ‘Table Grid’ style for table’s header and data rows respectively. It is compulsory to provide brief description of table/figure after its caption. Styles for table and figure descriptions are “Table Description” and “Figure Description” respectively.

Press **Ctrl + Shift + S** to see list of styles mentioned above. Figure 1 shows the Apply Style window displaying the list of styles. Select any text then press **Ctrl + Shift + S**, the Apply Style window will show you the current style applied on that text and if required, you can change the style by selecting any other style from the “Style Name” dropdown.

Figure 1: List of Styles
This is brief description of above figure.

Table 1: This is Sample table caption
This is brief description of following Table.

Header row	Header row	Header row	Header row
Row1 col1	Row1 col2	Row1 col3	Row1 col4
Row2 col1	Row2 col2	Row2 col3	Row2 col4

Table 2: This is Sample table caption
This is brief description of following Table.

Header row	Header row	Header row	Header row
Row1 col1	Row1 col2	Row1 col3	Row1 col4
Row2 col1	Row2 col2	Row2 col3	Row2 col4

Equations

Use equation editor to write equations in this report. Use last button of the custom tool bar to invoke equation editor. Similar to tables and figures, equations should also be aligned centered horizontally. Number all equations and insert them in parenthesis. Below is a sample equation and its reference number. An equation can be referenced like this: ‘it is clear from (1)’.

$$\sum_{\forall v \in V(G)} \deg(v) = 2|E(G)| \quad (1)$$

Header/Footer

Notice the headers in this document, before Introduction (i.e., the main content of this document) page numbers are in roman numerals. The page numbers of the actual content start with Arabic numerals i.e. 1, 2, 3 and so on. All of the **odd numbered pages** contain title of your project while the **even numbered pages** contain the section heading (i.e., chapter’s name) in the headers.

Other Formatting Guidelines

- Keep 2-4 GUIs in one page. Consume as much space as possible. Do not leave most of page blank unnecessarily.
- Do not break tables (or use cases) in multiple pages unless the table is too large to fit in one page.
- Re-arrange the content i.e., text, images and tables properly to meet above two guidelines.

References

Always refer to the source of information by inserting the reference number in square brackets like this [5]. The reference numbers can either be added at the end of the sentence or within the sentence without changing the punctuation of sentence. A reference can also be cited as follows: ‘as Ruskey [2] mentioned’. List each source only once on your reference page.
