

圖 9-10 中樞神經系統之發育與成熟時間表

Ma'am Kashmala Parveiz

Question # 1

Write a program that inputs current day and month from the user. It then calculates

```
#include <iostream>

using namespace std;

int main() {
    int mth,day,total;

    int mo[12] = {31,28,31,30,31,30,31,31,30,31,30,31};

    cout<<"enter the month: ";
    cin>>mth;

    cout<<"enter the day: ";
    cin>>day;

    for (int i=0; i<(mth-1); i++) {
        total+= mo[i];
    }

    total+= day;

    cout<<"total days: "<<total;

    return 0;
}
```

Output:

 C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.11.exe

```
enter the month: 8
enter the day: 23
total days: 235
-----
Process exited after 6.452 seconds with return value 0
Press any key to continue . . .
```

Question # 2

Write a program that inputs 10 numbers from the keyboard into an array. The program should find out how many of them are prime numbers.

```
#include <iostream>

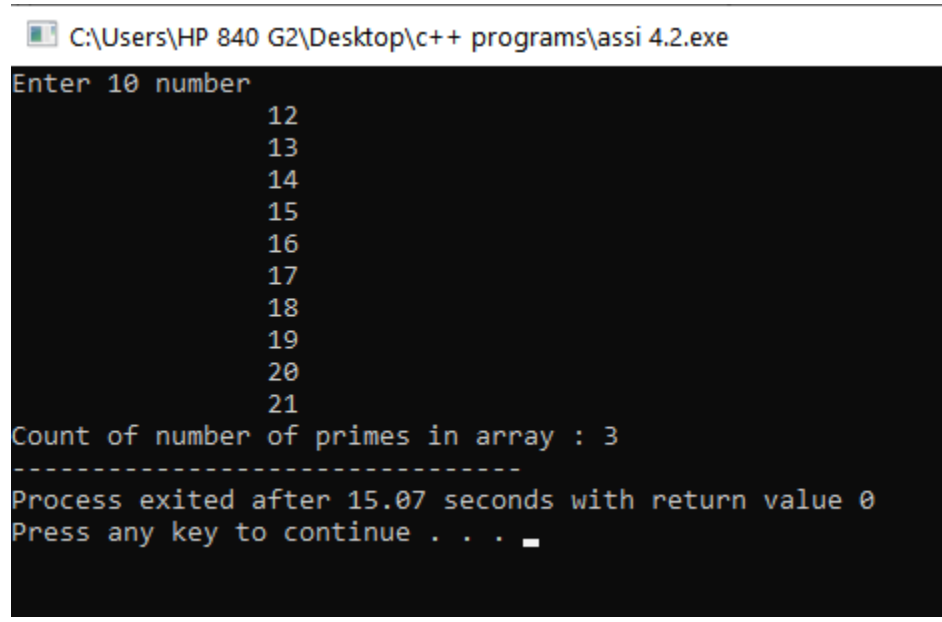

using namespace std;

int Prime(int num){
    bool prime_num=1;
    if (num == 1||num == 0)
        { return 0; }
    for (int j = 2; j <= num/2; j++){
        if (num % j == 0){
            return 0;
        }
    }
    if(prime_num)
        {return 1;}
    else
        {return 0;}
}

int main(){
    int arr[10];
    int n = 10;
    int count=0;
    int isprime=0;
    cout<<"Enter 10 number\n";
    for(int i=0;i<n;i++){
        cout<<"\t\t";
```

```
        cin>>arr[i];
    }
    for(int i=0;i<n;i++){
        isprime=Prime(arr[i]);
        if(isprime==1)
            count++;
    }
    cout<<"Count of number of primes in array : "<<count;
    return 0;
}
```

Output:

The screenshot shows a Windows command prompt window titled "C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.2.exe". The program prompts the user to "Enter 10 number" and lists the numbers 12 through 21. It then displays the output "Count of number of primes in array : 3". Below this, it shows the execution details: "Process exited after 15.07 seconds with return value 0" and "Press any key to continue . . .".

```
C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.2.exe
Enter 10 number
12
13
14
15
16
17
18
19
20
21
Count of number of primes in array : 3
-----
Process exited after 15.07 seconds with return value 0
Press any key to continue . . .
```

.....

Question # 3

Write a program that inputs values in a 2D array with three rows and two columns. The program passes the array to a function. The function returns the maximum value in the array.

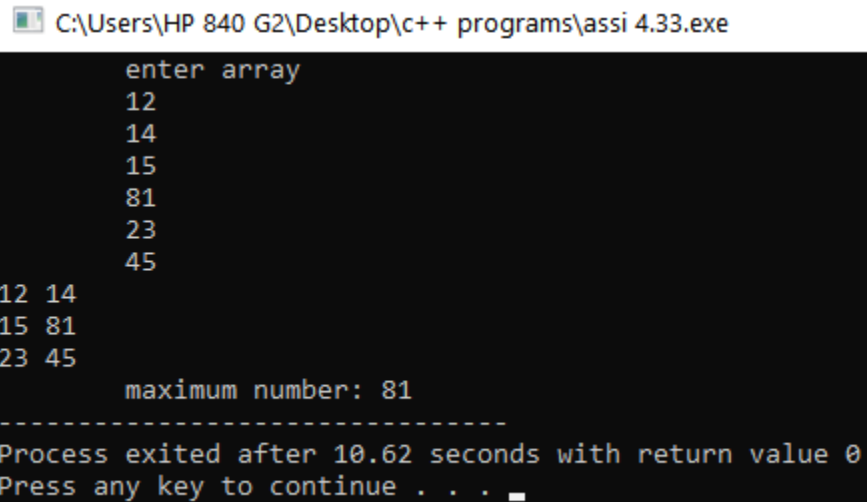

```
#include <iostream>

using namespace std;

void fun(int arr[3][2])
{
    for(int i=0;i<3;i++){
        for(int j=0;j<2;j++){
            cout<<arr[i][j]<<" ";
            if(arr[0][0]<arr[i][j])
                arr[0][0]=arr[i][j];
        }cout<<endl;
    }
    cout<<"\tmaximum number: "<<arr[0][0];
}

int main(){
    int arr[3][2];
    cout<<"        enter array        \n";
    for(int i=0;i<3;i++){
        for(int j=0;j<2;j++){
            cout<<"\t";
            cin>>arr[i][j];
        }
    }
    fun(arr);
    return 0;
}
```

Output:

A screenshot of a Windows command prompt window showing the execution of a C++ program. The title bar reads "C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.33.exe". The program prompts the user to "enter array" and receives five inputs: 12, 14, 15, 81, and 23. It then displays the first three inputs as "12 14", "15 81", and "23 45". The program identifies the "maximum number: 81" and ends with a separator line, a message "Process exited after 10.62 seconds with return value 0", and a prompt "Press any key to continue . . .".

```
C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.33.exe
enter array
12
14
15
81
23
45
12 14
15 81
23 45
maximum number: 81
-----
Process exited after 10.62 seconds with return value 0
Press any key to continue . . .
```

Question # 4

Write a program that inputs 5 floating-point values in an array and displays the values in reverse order.

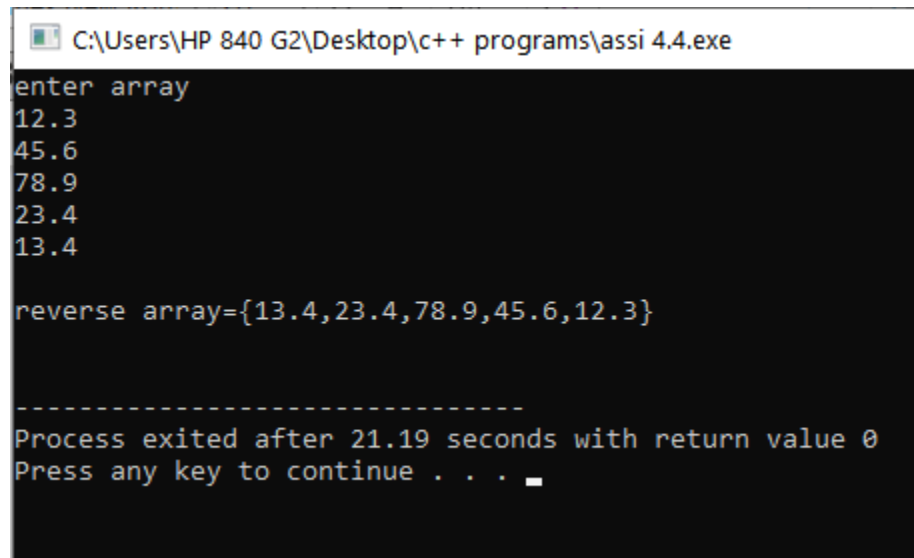

```
#include <iostream>

using namespace std;

int main(){
    float arr[5];
    cout<<"enter array\n";
    for(int i=0;i<5;i++){
        cin>>arr[i];
    }
    cout<<"\nreverse array={";
    for(int i=(5-1);i>=0;i--){
        cout<<arr[i]<<" ";
    }
}
```

```
    cout<<"\b}\n\n";  
    return 0;  
}
```

Output:

The screenshot shows a Windows command prompt window titled "C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.4.exe". The program prompts the user to "enter array" and receives five inputs: 12.3, 45.6, 78.9, 23.4, and 13.4. It then displays "reverse array={13.4,23.4,78.9,45.6,12.3}". Below this, a separator line of dashes is shown, followed by the message "Process exited after 21.19 seconds with return value 0" and "Press any key to continue . . .".

```
C:\Users\HP 840 G2\Desktop\c++ programs\assi 4.4.exe  
enter array  
12.3  
45.6  
78.9  
23.4  
13.4  
  
reverse array={13.4,23.4,78.9,45.6,12.3}  
  
-----  
Process exited after 21.19 seconds with return value 0  
Press any key to continue . . .
```

.....
